AI / Backend Intern

Company: Nexaflo Automations
Website: www.nexafloautomations.com
Location: Remote (Work From Home)
Duration: 1-2 Months (Extendable)
Stipend: Performance Based

+ About Nexaflo Automations

Nexaflo Automations builds **AI powered systems designed to solve real world problems** not in theory, but in everyday life. We create **practical, human centric AI solutions** that simplify workflows, improve decision making, and reduce friction in complex processes. Our work spans AI agents, automation systems, and intelligent platforms used by both individuals and businesses. We don't build AI for hype. **We build AI that works.**

+ What You'll Do

- Build backend systems for **AI driven applications**
- Work on **data processing, structuring, and API development**
- Integrate and work with **LLM APIs (DeepSeek, Groq, or similar)**
- Develop logic for **intelligent decision making systems**
- Contribute to **modular features** within a larger AI product

+ What We're Looking For

- Strong **Python fundamentals**
- Experience working with **APIs and structured data**
- Basic understanding of **AI/ML or LLM based workflows**
- Ability to **work independently and take ownership**
- At least **1-2 hands on projects (GitHub or portfolio required)**

Bonus Points	• Experience with FastAPI / Flask • Familiarity with AI agents or automation systems • Exposure to cloud environments / virtual machines
What You'll Gain	• Real-world experience building production level AI systems • Ownership of meaningful features • Fast-paced startup environment • Opportunity for long term role based on performance
Work Structure	• Flexible working hours • Daily progress updates are expected
